DETAILED ACTION

Allowable Subject Matter

1. Claims 5-44 and 56-78 allowed.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

- (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 3. Claims 79-81 rejected under 35 U.S.C. 103(a) as being unpatentable over Yang et al. (5,940,155) in view of Clerc et al. (4,813,770) further in view of Terashita et al. (6,628,359)

Regarding Claims 79-81, Yang et al. disclose liquid crystal displays containing tilted optical axis compensation films having a negative birefringence where in Figs. 1 and 7, an optical compensation lamination arrangement using tilted optical axis compensation films 76 and 72 with negative birefringence to achieve a better viewing angle characteristics is shown. Yang et al. fail to disclose the required tilts of the individual layers being in opposite directions and the required orthogonal relationship. However, Clerc et al. disclose a cell with a double liquid crystal layer using the electrically controlled birefringence effect and process for producing a uniaxial medium with negative optical anisotropy usable in the cell where in column 11 lines 65-68 and column 12 lines 1-5 the required oppositely directed tilt directions of the individual layers

Art Unit: 2826

are disclosed. Furthermore, Terashita et al. disclose a liquid crystal display device including phase difference compensation element where in claim 1, the required orthogonal relationship is disclosed.

It would have been obvious to one of having ordinary skill in the art at the time the invention was made to include the required opposite tilt directions and the orthogonal relationship in Yang et al. as taught by Clerc et al. and Terashita et al., respectively, in order to have a liquid crystal display device with increased performance.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Fazli Erdem whose telephone number is (571) 272-1914. The examiner can normally be reached on M - F 8:00 - 5:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Nathan Flynn can be reached on (571) 272-1915. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
